Master of Professional Science: Environmental Studies and Sustainability

Combining science with organizational and communication skills, the Unity College Master's in Environmental Studies and Sustainability will give you the skills and credentials you need to advance in your career path.

Sustainability science is a problem-based, solution-oriented framework for creating a resilient civilization. The framework combines sustainability with skills in the social sciences and humanities that professionals need to work in the context of environmental, economic and cultural concerns. Mitigation and adaptation to climate change is emphasized along with biodiversity conservation, resource conservation, and mitigation of pollution.

Who is this program designed for?

This degree is aimed at new graduates, career changers, and those interested in pursuing sustainability roles within their current organizations. It is a great choice for graduate students who have a degree but want to complement their current skill set with training in business, management, and communications, as well as professionals who already have a job in the environmental field or at a business and want more experience in the tenets of sustainability. Government workers who want more experience and knowledge about sustainability, and current sustainability coordinators seeking to upgrade their skills en route to a promotion, will also find this degree instrumental.
